CRIS: CONTROL RELIABLE INSPECTION SYSTEM
THE PATENTED LABEL AND PACKAGE VERIFICATION SYSTEM FROM SENSORS INTEGRATION
WHAT IS CRIS?

CONTROL RELIABLE INSPECTION SYSTEM

The CRIS is a product and package verification system with patented fail-to-safe inspection technology to ensure all flawed products are rejected from a production line. The time and date track-and-trace feature built into the CRIS allows the user to capture logs of every interaction of personnel as well as every component and system issue that arises. The CRIS uses Cognex vision cameras and barcode scanners along with Allen Bradley/Rockwell PLC and HMI platforms for high-quality and reliable operation. With Cognex and Allen Bradley/Rockwell components, the CRIS offers the wide array of accessories, support, and options you have come to expect from industry leaders.

WHO IS SENSORS INTEGRATION?

Sensors Integration is a Cognex Partner System Integrator offering comprehensive problem-solving and integration services with expertise in product and package verification, vision systems, lighting, RFID, and barcodes. Sensors Integration provides solutions for complicated real-world application challenges based on in-depth research, extensive experience, and thorough testing and verification in Sensors Integration’s working lab.

SYSTEM FEATURES AND OPTIONS

1D and 2D Barcode Verification
The CRIS has verification options for UPC and data matrix codes at speeds of up to 1200 inspections per minute.

Logo Integrity, Pattern and Color Recognition
The CRIS can be programmed to recognize logos, colors, patterns, and shapes for high quality inspection and rejection.

Time and Date Event Recording
For every reject, mismatch, employee login, or product change, the CRIS records the time and date of the event. This track and trace methodology allows users to track errors and changes in the system.

Date and Lot Code Verification
The CRIS has accurate date and lot code verification available that will reject products that don’t specifically meet the parameters you set for approval.

Fail-To-Safe Inspection
The multi-patented design assumes product should be rejected until positively verified to ensure product safety and accuracy. Faults in any part of the line prevents products from continuing past the inspection point.

Plug and Play
The CRIS Compact Series features integrated wiring for fast, easy installation without field wiring. Simply plug it in, configure the system, and start verifying products.

Patented Multi-level RFID Access Control
Provides varying levels of access control over line changes and inspection approvals. The CRIS time and date stamps who interfaces with the system so you can track who created a change.

Dynamic Speed-Compensated Reject System
Our reject system tracks product pass signals as they pass the inspection point and uses our patented algorithm to accurately reject products even with continuously varied line speeds.

Remote Technical Support
Each system may be equipped with VPN that connects through a secure network for remote technical support, including making changes and analyzing diagnostics.
